

CSE 2218: DSA II Lab
Introduction to C++
Practice

Question - 1

1. Declare a class "Employee" and declare the following attributes inside the class
 - a. name (string: private)
 - b. id (int: public)
 - c. salary (double: private)
2. Declare necessary constructor/getter-setter
3. Write a function "display" inside the class which will print all the information of an employee
4. In main method, create a vector of "Employee" and insert the following employees
 - "Rahim", 2, 8000
 - "Karim", 1, 15000
 - "Abir", 4, 9000
 - "Roni", 3, 18000
5. Find the employees whose salary ≥ 10000
6. Define a function "**Increment(double percentage)**" inside the class which will increase the salary of an employee using the following formula:
$$\text{salary} += \text{salary} * \text{percentage}/100$$
In main, increase salary by 15% those have salary ≥ 15000 , otherwise increase salary by 10%.
7. Sort the employees in ascending order of id
8. Sort the employees in descending order of salary. Then print the employee with the highest salary.

Question - 2

You are given an array. You have to find the frequency of each element in the array using map.

Example:

Array = {5, 1, 21, 6, 5, 16, 21, 5, 1}

Output:

1 --> 2
5 --> 3
6 --> 1
16 --> 1
21 --> 2
